PROFESSIONAL SUMMARY

Frontend-focused full-stack developer (React.js, Next.js, Tailwind CSS) who builds responsive, role-aware interfaces for real users: authenticated flows, admin dashboards and secure document-download experiences. Shipped **two production web applications** during an internship, working from UI to API integration to deployment. Seeking a **Frontend / React developer internship** to build fast, polished and accessible user interfaces.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript, HTML5, CSS3, Tailwind CSS, Vite, React Router
Auth & Client Integration: NextAuth.js, JWT authentication flows, middleware route protection, role-based UI (RBAC), REST API integration
Backend (Supporting): Node.js, Express.js, REST APIs, Socket.io, Multer, MongoDB, Mongoose, MySQL, Prisma ORM
Tools & Deployment: Git, GitHub, GitHub Actions (CI/CD), Vercel, Render, Docker, Postman, Jest, Cloudinary
Languages: JavaScript [Intermediate], Python [Advanced], C++ [Intermediate] (Kalvium Dojo Belt Levels)

EXPERIENCE

Pixorama | Software Development Intern *Jun 2026 - Aug 2026*

- Built and deployed **2 full-stack web applications** used by real users, developing the **React.js** front ends and connecting them to Node.js, Express.js and MongoDB back ends.
- Integrated validated **REST APIs** and **JWT authentication flows** into the UI, and debugged authentication and CRUD workflows to improve data integrity and reliability across both applications.
- Containerized applications with **Docker** and deployed them on **Linux**, gaining hands-on experience with production deployment and troubleshooting.
- Collaborated directly with engineering mentors to ship features; contribution formally verified by an Experience & Reference Letter.

PROJECTS

BOAT Warranty Hub - Full-Stack Warranty Management Platform | GitHub Repo *Jul 2026 - Present*

- Built a **Next.js and Tailwind CSS** platform where customers verify product warranties by serial number, view product and repair history, and securely download warranty documents.
- Developed an **RBAC-protected admin dashboard** with Product and Repair CRUD interfaces so administrators can maintain accurate warranty and service records.
- Implemented **NextAuth.js/JWT/bcrypt** authentication with middleware route protection, and secured documents with Google Cloud Storage signed URLs.
- Set up **Docker + GitHub Actions CI/CD** with Vercel for production deployment. **Tech:** Next.js, Tailwind CSS, NextAuth.js, MySQL, Prisma.

ResolveAI - AI-Powered IT Incident & Support Management Platform | GitHub Repo | Live Demo *2026*

- Built the **React 18 + Vite + Tailwind CSS** front end of a full-stack GenAI platform that automates IT incident triage, root-cause diagnosis and resolution planning, with human-in-the-loop escalation for low-confidence cases.
- Built role-based experiences for **3 user roles** (Employee, Agent, Admin), including an **admin telemetry dashboard** and knowledge-base management with PDF SOP upload.
- Backed by a sequential **5-agent Gemini pipeline** with RAG on MongoDB Atlas Vector Search, JWT/bcrypt authentication and Jest/Supertest backend tests.
- **Tech:** React 18, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, Google Gemini, Multer, pdf-parse, Jest, Supertest.

EDUCATION

Kalvium UG Program in CS (Software Product Engineering) | B.Tech, SGT University *2025 - 2029*

Campus: Gurugram

ACHIEVEMENTS & EXTRACURRICULARS

- **Technical Contributions:** Maintains a public GitHub portfolio of full-stack and Generative AI projects, including authentication systems, multi-agent AI and RAG applications.
- **Technical Practice:** Practices data structures and algorithms through consistent, hands-on problem solving.
